ERGOTEST COMP 25 ►

con dispositivo di misura (opzionale)
with the measuring device (optional)

ERGOTEST DIGI: the state-of-the-art range of Galileo hardness testers. Recently renovated and updated with a more sophisticated software which controls all the instrument functions and the complete measuring process.

The operative interface is simplified thanks to the new colour touch screen panel while the load selection is effected by means of a handy-placed knob on the right side of the machine.

The test is carried out automatically when a signal confirms that the pre-load has been applied correctly. The new software also allows to send data to the other peripherals either via USB port or configuring the LAN connection.

ERGOTEST DIGI

DIGITAL hardness testers

The Ergotest DIGI range consists of 3 models:

- | | |
|-------------------|--|
| DIGI 25 R | performs standard Rockwell tests |
| DIGI 25 RS | for the execution of standard and superficial Rockwell tests |
| DIGI 25 U | can carry out standard Rockwell tests but has a different load configuration for Brinell and Vickers tests |

(All these models allow the generation of Brinell and Vickers indentations and relevant reading by means of the optional optical kit item 742032280)
